Project Title: "Product Positioning & Sales Performance Analysis".

Project Design Phase-I - Solution Fit Template **Team ID:**

Customer Segment (CS): Who is your customer? Retail category managers and pricing strategists optimizing market share for Food, Electronics, and Clothing sectors

Jobs-To-Be-Done / Problems (J&P): What job are they trying to do? Comparing internal sales vs competitor pricing; identifying which demographics drive Seasonal vs Non-Seasonal sales volume

Triggers (TR): What triggers action? Drop in sales volume for specific category or competitor significantly lowering prices

Emotions Before/After (EM): How do they feel? BEFORE - Overwhelmed by raw data, uncertain about Price Gap | AFTER - Confident and in control with clear visual understanding

Available Solutions (AS): What are they using now? Manual spreadsheets and basic static reports (low cost but extremely slow, lacks interactive filtering)

Customer Constraints (CC): What holds them back? Limited time for manual data cleaning, need for tool that scales as product catalog grows

Behaviour (BE): What do they do today? Manually checking competitor websites, using basic Excel pivot tables to calculate average sales

Channels of Behaviour (CH): Where do they work? ONLINE - Researching market trends on retail portals | OFFLINE - Internal team meetings for quarterly sales performance

Problem Root Cause (RC): Why does this problem exist? Lack of integrated tool that connects price, category, and demographic data into single interactive view

Your Solution (SL): What's the fit? Interactive Tableau dashboard visualizing Product Positioning dataset with filters for Seasonality and Demographics to instantly see impact on Sales Volume
