Customer Journey

Date	2 march 2026
Team ID	
Project Name	**Product Positioning & Sales Performance Analysis**.
Maximum Marks	4 Marks

“This interactive Tableau dashboard enables retail analysts to visualize the impact of shelf placement and pricing gaps on sales volume. By mapping the end-to-end journey of a Category Manager, the project identifies key opportunities to optimize product positioning and drive data-backed strategic decisions."
	Stage	Steps	Interactions	Goals & Motivations	Positive / Negative...
1	1. Entice	Realizes that current reports don't show why sales are dropping in specific categories.	Team meetings; reviewing static spreadsheets.	"Help me find a visual way to see the Price Gap between us and competitors."	(+) Discovering a dataset with demographics and competitor pricing.
2	2. Enter	Opens the Tableau dashboard and prepares the Product Positioning CSV.	Tableau interface; checking Solution Architecture for data flow.	"Help me upload the data correctly so I can start the analysis."	(-) Dealing with mismatched headers in the raw data.
3	3. Engage	Interacts with the Heat Map (Positioning) and Donut Chart (Demographics).	Applying filters for Seasonality; hovering for specific product details.	"Help me identify which demographic drives volume for 'Electronics' in the winter."	(+) Seeing a clear correlation between shelf position and sales volume.
4	4. Exit	Exports dashboard findings into a strategic report for stakeholders.	Clicking "Export to PDF"; sharing findings on GitHub.	"Help me provide evidence-based pricing recommendations to the board."	(-) Realizing some "Foot Traffic" data points are missing from the source.
5	5. Extend	Plans to upgrade the system to a live SQL connection for real-time updates.	Discussing scalability with the IT department.	"Help me automate this so I can focus on strategy instead of data cleaning."	(+) Reducing manual reporting time by 60-70%.
